Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-thefold content. Prioritize visible content that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 13% of the final above-the-fold content could be rendered with the full HTML response.
