⚠ Should Fix:

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 18 blocking script resources and 13 blocking CSS resources. This causes a delay in rendering your page.

Approximately 1% of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

96 / 100 User Experience

❗ Consider Fixing:

Size content to viewport

The page content is too wide for the viewport, forcing the user to scroll horizontally. Size the page content to the viewport to provide a better user experience.

The page content is 413 CSS pixels wide, but the viewport is only 412 CSS pixels wide. The following elements fall outside the viewport:

- The element <div class="row">42.000 Penggun...6150 Soal</div> falls outside the viewport.

- The element <div class="col l6 s12">Jadilah bagian...ng lebih baik!</div> falls outside the

viewport.

- The element <div class="row">Daftar | Login...HUBUNGI KAMI</div> falls outside the viewport.

- The element <div class="row"></div> falls outside the viewport.

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target and 1 others are close to other tap targets.
