Should Fix:

Avoid landing page redirects

Your page has 2 redirects. Redirects introduce additional delays before the page can be loaded.

Avoid landing page redirects for the following chain of redirected URLs.

- http://oracle.com/
- http://www.oracle.com/
- https://www.oracle.com/index.html

Leverage browser caching

Mobile

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 5 blocking script resources and 2 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

- https://www.oracle.com/assets/css/oracle-video.css

Optimize images

Properly formatting and compressing images can save many bytes of data.

[Optimize the following images](#) to reduce their size by 153.5KiB (20% reduction).

- Compressing https://www.oracle.com/us/assets/hp07-mce-lv-2017-3655269.jpg could save 45.9KiB (45% reduction).

- Compressing https://www.oracle.com/us/assets/hp08c2p2-mbp-modern-approach-2x-2613913.jpg could save 18KiB (14% reduction).

🔶 Consider Fixing:

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. Prioritize visible content that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 7% of the final above-the-fold content could be rendered with the full HTML response snapshot:7.

❗ Consider Fixing:

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

Mobile

- The tap target Twitter is close to 1 other tap targets.

- The tap target Google+ is close to 1 other tap targets.
